

Catálogo de Aplicaciones  
Bujías de Pre calentamiento

Magneti Marelli ha creado una gama completa de bujías de precalentamiento diseñadas y fabricadas conforme a los estándares cualitativos internacionales, garantizando una amplia cobertura de vehículos circulantes. Todas las bujías de precalentamiento de Magneti Marelli llevan un doble filamento y pueden permanecer encendidas el tiempo necesario que establezca la centralina después de la puesta en marcha del motor.

- ✓ **Arranques en frío inmediatos, incluso en condiciones climáticas muy duras**
- ✓ **Reducción de los consumos y de las emisiones contaminantes**
- ✓ **Fiabilidad total**
- ✓ **Larga duración**

## Principio de Funcionamiento

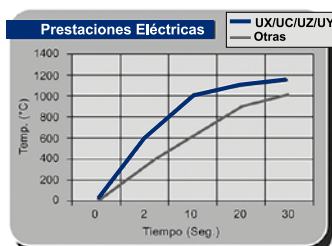

- 1 Cuerpo doble base de apoyo y recubrimiento especial aislante.**  
Asegura perfectas características de estanqueidad y aislamiento.
- 2 Funda en superaleación anticorrosiva térmica y química.**  
Espesor variable en función de la temperatura específica para cada motor, que se desarrolla en el interior de la precámara.
- 3 Polvo aislante (Mg O) a alta compresión.**  
El compactamento, que elimina las intercapas de aire que perjudican la duración del filamento y que aísla perfectamente la espiral, es de particular importancia para la calidad exigida a una bujía de precalentamiento.
- 4 Filamento calentador.**  
Calienta rápidamente la mezcla para obtener un encendido rápido, incluso en condiciones extremas y mantiene alta la temperatura del motor una vez en marcha obteniendo emisiones más limpias.
- 5 Filamento regulador.**  
Gracias a sus características de resistencia controla el aumento de la temperatura para calentar la mezcla lo más rápido posible y así permitir que la bujía se mantenga caliente hasta 3 minutos sin riesgo de sufrir daños.
- 6 Soldadura del filamento, de calidad y control constante.**  
Realizada con proceso automatizado mediante fusión al láser.

## Prestaciones Eléctricas UX / UC / UZ / UY

MAGNETI MARELLI Ultra rápidas DOBLE FILAMENTO

La sinergia de estos componentes reduce el tiempo de espera logrando un funcionamiento óptimo a partir de los 2 segundos, otorgando un mejor rendimiento del motor y una significativa disminución de la descarga de gases incombustos.

Tiempo Seg.	Normal °C	UX/UC/UZ/UY °C
0	0	0
2	350	600
10	600	1000
20	900	1100
